

IMPACT RESISTANT PANELS

Mapes Panels has developed a large-missile impact resistant line of laminated panels for use in curtain wall, storefront and window applications where design elements require high impact/high load materials. Mapeshield panels can be used in any framing system design for this type of application.

The panels can match any architectural finish including Kynar, Anodized and Baked Enamel. Custom applications including bullet resistant panels are also available.

Mapeshield panels are approved for use in Florida and HVHZs (#FL32414).
